(54) Title: **NON-DISRUPTIVE ACTIVITY SWITCHING ON REMOTE CONTROL**

(57) Abstract: A control device has an activity-based user interface for controlling a system with a renderer and multiple sources. The renderer is configured for rendering content available from the multiple sources. The user interface provides a first set of user controls for control of the system in a first activity, and a second set of further user controls for control of the system in a second activity. The control device controls switching the system from the first activity to the second activity upon detecting a validating user interaction with the user interface to validate the switching.
